C. Harmonised Transparency Template - Glossary

The definitions below reflect the national specificities

Field Number	1. Glossary - Standard Harmonised Items	Definition
UC 1.1	OC Calculation: Actual	The actual overcollateralisation (OC) ratio is calculated by dividing (i) the total outstanding balance of the credits excluding accrued interest plus Other Assets included in the cover pool by (ii) the total nominal amount of the covered bonds excluding accrued interest. For clarification purposes, the Other Assets are calculated the following way: (a) Depoits are valued according to their amount; (b) The eligible assets for Eurosystem credit transactions are valued according to the rules for valuation defined by the Eurosystem or, if lower according to its nominal value plus accrued interest
HG.1.1 HG.1.2	OC Calculation: Legal minimum	According to the Portuguese covered bonds legislation, the outstanding amount of covered bonds issued by an Institution may not exceed 95% of the cover assets amount, ie, the minimum legal OC is 5.26%
HG.1.3	OC Calculation: Committed	Commited OC is the level of OC the Issuer has agreed and is commited to maintain. In some circumstances, the level of commited OC is the level required by Rating Agencies to maintain the current levels of the Covered Bonds.
HG.1.4	Interest Rate Types	Fixed rate / floating rate
HG.1.5	Maturity Buckets of Cover assets	Cover assets amortisation profile according to principal payment schedulled assuming no prepayments nor defaults
HG.1.6	Maturity Buckets of Covered Bonds	Covered Bonds maturities according to contractual maturities not considering the 1 year extension period
HG.1.7	LTVs: Definition	Current LTV Unindexed - It is calculated by dividing the outstanding balance of the loan by the value of the underlying property (last physical valuation); Current LTV Indexed - It is calculated by dividing the outstanding balance of the loan by the latest valuation amount of the underlying property (i.e. indexed value or last physical valuation);
HG.1.8	LTVs: Calculation of property/shipping value	Property valuation according to the latest on-site appraisal or according to indices or statistical methodes approved by the Bank of Portugal;
HG.1.9	LTVs: Applied property valuation techniques, including whether use of index, Automated Valuation Model (AVM) or on-site audits	Unindexed: Valuations done through on-site appraisals; Indexed: By applying an indice or statistical method considered appropriate duly submitted to the Bank of Portugal
HG.1.10	LTVs: Frequency and time of last valuation	A full valuation of the underlying properties must be performed by an independent appraiser, at origination or after, prior to the inclusion of the mortgage loan in the cover pool. Properties should also be assessed according to the following rules: - The value of residential properties should be checked on a frequent basis, at least every three years. This procedure can be done using statistical models approved by the Bank of Portugal; in case of substancial fall in the value of the property, it must be re-appraised by an expert and if an individual residential mortgage exceeds EUR 500,000.00, the property must be appraised by an expert at least every 3 years; - The value of commercial properties must be checked on an annual basis. This procedure can be done using statistical models approved by the Bank of Portugal and if an individual commercial credit exceeds EUR 1,000,000.00, the property must be appraised by an expert at least every 3 years
	Explain how mortgage types are defined whether for residential housing, multi-family housing, commercial real estate, etc.	Portuguese covered bonds legislation defines two mortgage types as eligible for Covered Bonds: residential mortgages (with a maximum LTV of 80%) and commercial mortgages (with a maximum LTV of 60%). The current cover pool includes residential mortgages only
HG.1.11	Hedging Strategy (please explain how you address interest rate and currency risk)	Fixed rate Covered Bonds may be hedged with fix-to-floating swaps; the hedging of the foreign exchange risk is mandatory
HG.1.12	Non-performing loans	According to the Portuguese covered bonds legislation, any loan which is in arrears by more than 90 days must be removed from the pool and substituted by another
HG.1.13	2. Reason for No Data	loan which fulfils the eligibility criteria. Therefore, there are no NPL's included in the cover pool Value
HG.2.1	Not applicable for the jurisdiction	ND1
HG.2.2	Not relevant for the issuer and/or CB programme at the present time	ND2
HG.2.3	Not available at the present time	ND3
	3. Glossary - Extra national and/or Issuer Items	Definition
HG.3.1	Central bank eligible assets	The amount of eligible assets for Eurosystem credit transactions is calculated according to the rules for valuation defined by the Eurosystem or, if lower according to its nominal value plus accrued interest

Notes

¹ Soft Bullet Date (Extended Maturity)

If the covered bonds are not redeemed on the relevant maturity date, the maturity will automatically be extended on a monthly basis up to one year. In that event, the covered bonds can be redeemed in whole or in part on a monthly basis up to and including the Extended Maturity Date.

² Other Assets

In addition to the mortgage assets, other assets (or substitution assets) may be included in the cover pool up to an amount equal to 20% of the cover pool, subject to the following eligibility criteria:

- Deposit with the Bank of Portugal in cash or ECB eligible securities, or
- Deposits held with credit institutions rated at least A-.

3 Overcollateralisation

The overcollateralisation ratios are calculated by dividing (i) the total outstanding balance of the assets included in the cover pool by (ii) the total nominal amount of the covered bonds (both excluding accrued interest). For clarification purposes, all assets included in the cover pool are eligible assets.

⁴ Net Present Value (NPV)

The NPV of the assets is obtained by discounting all future cash flows with the IRS curve plus relevant spread.

The NPV of the liabilities is obtained by discounting all future cash flows with the IRS curve plus relevant spread.

Substitution assets as well as any derivatives in the pool are marked at their market value.

NPV of liabilities cannot exceed the NPV of the portfolio assigned to the bond, including derivatives.

Stress testing - Net present value is also calculated for a 200 bps shift upwards and downwards of the discounting curve.

⁵ Loan-to-Value

The Current Unindexed LTV is calculated by dividing the outstanding balance of the loan by the value of the underlying property (last physical valuation).

A full valuation of the underlying properties must have been performed by an independent appraiser, at origination or after, prior to the inclusion of the mortgage loan in the cover

Properties (both residential and commercial) should also be revalued regularly:

- For commercial assets this must be done on an annual basis;
- Residential properties must be revalued at least every 3 years if the individual mortgage credit value exceeds € 500.000

-Also the value of the mortgage property should be checked on a frequent basis, at least every three years, in order to identify the properties that require appraisal by an expert (this procedure can be done using statistcal models approved by the Bank of Portugal).

⁶ Insured Property

All mortgages must have property damage insurance covering fire and floods.

⁷ Delinguencies

A loan is considered to be delinquent if any payment is in arrears by more than 30 days. According to the Portuguese covered bonds legislation, any loan which is in arrears by more than 90 days must be removed from the pool and substituted by another loan which fulfills the elegibility criteria. Therefore, there are no NPL's included in the cover pool.
